

President and Principal Hydrogeologist
gglanders@augustmack.com

Geoffrey A. Glanders is the President and Principal Hydrogeologist for August Mack Environmental, Inc. He specializes in the evaluation, regulatory negotiation and implementation of practical, alternative strategies to address environmental remediation and compliance issues. He has more than 30 years of experience regarding subsurface investigation and remediation, emission estimation, point and fugitive source permitting, air pollution control technologies as well as regulatory negotiation for such industries as utilities, primary metals, chemical, printing, glass, foundry, paper and automotive. He has an active working knowledge of RCRA, CERCLA and the Clean Air Act as well as innovative

technologies for site remediation. Additionally, he is responsible for the overall administration of the company utilizing his expertise in the technical, business and human resources aspects of environmental consulting. He also provides technical guidance on subsurface investigation, tank management, regulatory compliance and remedial design and construction projects. He has extensive experience in the assessment, investigation and remediation of industrial and commercial sites and has represented numerous companies as an expert witness. He also has a working knowledge of all federal and state regulations pertaining to solid and hazardous waste management, air emissions control and wastewater discharges.
